Ideas Dec 10 2021 A highly ambitious and lucid history of ideas from the very earliest times to the present day. In this hugely ambitious and exciting book Peter Watson tells the history of ideas from prehistory to the present day, leading to a new way of telling the history of the world. The book begins over a million years ago with a discussion of how the earliest ideas might have originated. Looking at animal behaviour that appears to require some thought: tool-making, territoriality, counting, language (or at least sounds), pairbonding. Peter Watson moves on to the apeman and the development of simple ideas such as cooking, the earliest language, the emergence of family life. All the obvious areas are tackled: the Ancient Greeks, Christian theology, the ideas of Jesus, astrological thought, the soul, the self, beliefs about the heavens, the ideas of Islam, the Crusades, humanism, the Renaissance, Gutenberg and the book, the scientific revolution, the age of discovery, Shakespeare, the idea of Revolution, the Romantic imagination, Darwin, imperialism, modernism, Freud right up to the present day and the internet.

Through Fire 5: Thlaxaca – The Blood Sun Jan 23 2023 The Magd are defeated, and the alliance is broken. Rakvir returns to Kerkrand to govern as Duyar and finds problems adjusting, especially when Arhilka nearly dies in childbirth. A unique solar eclipse causes many Thlaxacans to believe that the world has been re-born to the age of "Angry Thlac" who wants all "Otherworlders" to be driven from their lands. The "Nameless Ones" begin a campaign of assassinating "Otherworld" rulers, intending that reprisals will foment rebellion. By chance, Rakvir recognises the man sent to kill the Zgar and gets him to take him to the leader of the "Nameless Ones", fearing that the only thing that will persuade them to stop is by walking through fire again. The fifth volume in the epic "Through Fire", "Thlaxaca: the Blood Sun" is set in a distant planet, not too dissimilar from our own. Richard Hernaman Allen, a former Commissioner of HM Customs & Excise, wrote "Through Fire" over a period of thirty years.

Transcendence Nov 09 2021 Humans are a planet-altering force. Our closest living relatives, the now-endangered chimpanzees, continue to live as they have for millions of years. Yet we evolved through the same process. What are we then? Gaia Vince argues that our unique ability to determine the course of our own destiny rests on a special relationship between our genes, environment and culture going back into deep time. It is our collective culture, rather than our individual intelligence, that makes humans unique. Vince shows how four evolutionary drivers - Fire, Language, Beauty and Time - are further transforming our species into a superorganism- a hyper-cooperative mass of humanity that she calls Homo omnis. Drawing on leading-edge advances in population genetics, archaeology, palaeontology and neuroscience, Transcendence compels us to reimagine ourselves, showing us to be on the brink of something grander - and potentially more destructive. To think of humans as a smarter sort of chimp with cool tools is to miss what is truly extraordinary about us. Look around you- we are the intelligent designers of all you see -

including ourselves.

Fire Phenomena and the Earth System Mar 21 2020 Fire plays a key role in Earth system processes.

Wildfires influence the carbon cycle and the nutrient balance of our planet, and may even play a role in regulating the oxygen content of our atmosphere. The evolutionary history of plants has been intimately tied to fire and this in part explains the distribution of our ecosystems and their ability to withstand the effects of natural fires today. *Fire Phenomena and the Earth System* brings together the various subdisciplines within fire science to provide a synthesis of our understanding of the role of wildfire in the Earth system. The book shows how knowledge of fire phenomena and the nature of combustion of natural fuels can be used to understand modern wildfires, interpret fire events in the geological record and understand the role of fire in a variety of Earth system processes. By bringing together chapters written by leading international researchers from a range of geological, environmental, chemical and engineering disciplines, the book will stimulate the exchange of ideas and knowledge across these subject areas. *Fire Phenomena and the Earth System* provides a truly interdisciplinary guide that can inform us about Earth's past, present and beyond. Readership: Advanced students and researchers across a wide range of earth, environmental and life sciences, including biogeochemistry, paleoclimatology, atmospheric science, palaeontology and paleoecology, combustion science, ecology and forestry.

Walking through Fire Dec 22 2022 In *A Daughter of Isis*, Nawal El Saadawi painted a beautifully textured portrait of the childhood that moulded her into a novelist and fearless campaigner for freedom and the rights of women. *Walking through Fire* takes up the story of her extraordinary life. Famous for her novels, short stories and writings on women, Saadawi is known as the first Arab woman to have written about sex and its relation to economics and politics. Imprisoned under Sadat for her opinions, she has continued to fight against all forms of discrimination based on class, gender, nationality, race or religion. This autobiography shows the passion for justice that has shaped her life and her writing. We read about her as a rural doctor, trying to help a young girl escape from a terrible fate

imposed on her by a brutal male tyranny. We follow her attempts to set up women's organizations and to publish magazines later banned by the authorities or endangered by fundamentalist threats. We travel with her into exile after the publication of her name on a death list. We witness her first marriage to a freedom fighter hounded into drug addiction by a system that has no mercy. We share her struggle against her 'false self' and a second husband who offers her financial security and comfort - provided she stops writing. We live the beautiful moments of her third marriage with a man released after fourteen years of imprisonment and hard labour - their love, companionship and shared struggle. Nawal El Saadawi has carved a place for herself in the universal struggle against oppression. 'Words should not seek to please, to hide the wounds in our bodies, or the shameful moments in our lives', she says. 'They may hurt, give us pain, but they can also provoke us to question what we have accepted for thousands of years.'

After search teams find the bodies of three other women, Nikki suspects she hasn't just photographed a crazy tourist. Instead, she's captured a serial killer on film. New Perspectives on Arson and Firesetting Jan 31 2021 *New Perspectives on Arson and Firesetting: The Human-Fire Relationship* is the first forensic text to move away from a sole focus on anti-social firesetting. The author presents a broader investigation of the role of fire in human life with a view to informing research and practice. This book examines the evolutionary, psychological and social significance of fire. Drawing on interdisciplinary literature and original research data, it challenges the existing understanding of arson and firesetting. A new concept – fire use – is introduced, which is conceptualised as sitting on a continuum from non-criminalised to criminalised behavior. The author combines her experience as a practitioner forensic psychologist with her own research to consider the practical application of an alternative perspective. This includes a particular focus on the assessment and treatment of fire setters and a call for a socially informed approach to prevention. The forensic scope, applied focus, and emphasis on the importance of interdisciplinary research and practice makes *New Perspectives on Arson and Firesetting* essential reading for students in fields such as anthropology, sociology, criminology, and psychology, as well as interdisciplinary scholars, forensic practitioners, and allied professionals. The author is donating her royalties in full to Pancreatic Cancer UK.

From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems Oct 08 2021

Fire-derived organic matter, also known as pyrogenic carbon (PyC), is ubiquitous on Earth. It can be found in soils, sediments, water and air. In this wide range of environments, fire-derived organic matter, represents a key component of the organic matter pool, and, in many cases, the largest identifiable group of organic compounds. PyC

is also one of the most persistent organic matter fractions in the ecosystems, and its study is, therefore, particularly relevant for the global carbon cycle. From its production during vegetation fires to its transfer into soils, sediments and waters, PyC goes through different transformations, both abiotic and biotic. Contrary to early assumptions, PyC is not inert and interacts strongly with the environment: evidence of microbial decomposition, oxidation patterns and interactions with minerals have been described in different matrices. PyC travels across these different environments and it is modified chemically and physically, but remains persistent. This Research Topic explores important questions in our understanding of fire-derived organic matter, from the characterization and quantification of PyC components, to the transformation and mobilization processes taking place on terrestrial and aquatic ecosystems. The studies compiled here provide novel and, often, unexpected results. They all answer some of the questions posed and, more importantly, provide scope for many more.

Forged Through Fire: Developing Preparedness for the Perilous Encounter Aug 18 2022 What does it mean to become someone who lives without fear, a companion of peace throughout any trial? Is such a person possible? More importantly, is it possible for you to become that person? Violent situations are dramatically escalating in the West. There is no assured way of preventing them, no way to avoid them, and no way to ensure success when encountering them. It is a problem for which there is only one solution. It is a solution that whispers to us in every facet of our lives: we must be confident of who we are in light of a greater vision. In *Forged Through Fire: Developing Preparedness for the Perilous Encounter*, Burns describes real readiness for the active shooter, the serial killer, or the intruder that invades your life. Perhaps even more importantly, Burns calls forth a deep understanding of who we are.

A Guide to Hospital Administration and Planning Oct 16 2019 This book is a compilation of work by experts from the different domains of the healthcare industry, ranging from hospital planning to quality management, clinical services to disaster management. Healthcare organizations, being diverse, sensitive, and intricate, warrant thorough and flawless planning. The structure should be not only operationally efficient but also safe for its occupants and visitors. It starts with a brief introduction of the healthcare sector at different levels. It also attempts to justify how the changing healthcare landscape paved the way for establishing a contemporary and ever-evolving specialty of Hospital planning and designing, which is dynamic and frequently requires continuous improvements and updates. Clinical and non-clinical departments have been separately classified in this book, and their respective standards and guidelines have been incorporated while describing the planning concepts. Critical areas of a hospital such as ICU, CCU have been detailed precisely as the operational requirements and level of different sophistication required. A chapter on security aspects and disaster management has also been thoroughly envisioned based on the current scenario at the global level. Issues and management of Hospital Acquired Infection are explained in different chapters based on its relevance and application in that particular area.
