How were early  
stone tools made,  
and what can they  
tell us about the  
development of  
human cognition?  
This question lies at  
the basis of  
archaeological  
research on human  
origins and  
evolution, and the  
present volume  
fulfils a growing  
need among  
advanced students  
and researchers  
working in this  
field. The individual  
chapters by a range  
of leading  
international  
scholars approach  
stone knapping  
from a  
multidisciplinary  
perspective that

embraces  
psychology,  
physiology,  
behavioural biology  
and primatology as  
well as  
archaeology. The  
skills and behaviour  
of humans and their  
primate relatives  
are key parts of the  
enquiry. The result  
is a better  
understanding of  
early human  
engagement with  
the material world  
and the complex  
actions required for  
the creation of  
stone tools. The  
book contains many  
illustrations and is  
extensively  
referenced, and  
provides a  
landmark  
contribution in this  
field. Provides an  
excellent one-stop  
resource for  
understanding the

the research and applications of fractography of glasses and ceramics. This publication is primarily based on my finds rather than a detailed historical paper. Decades of research and ground work goes into finding all these sites, and this publication is for those who wish not to pursue such a task, but rather use this as their guide to re-visit and explore the rich history that our pioneers had created. I have ran countless expeditions in this area over the last 20 years, and continue to do so year after year. To date, I have recorded over 10,000 historical

sites Human development is a long and steady process that began with stone tool making. Because of this skill, humans were able to adapt to climate changes, discover new territories, and invent new technologies. "Pressure knapping" is the common term for one method of creating stone tools, where a larger device or blade specifically made for this purpose is use to press out the stone tool. Pressure knapping was invented in different locations and at different points in time, representing the adoption of the Neolithic way of life in the Old world.

Recent research on pressure knapping has led for the first time to a global thesis on this technique. The contributors to this seminal work combine research findings on pressure knapping from different cultures around the globe to develop a cohesive theory. This contributions to this volume represents a significant development to research on pressure knapping, as well as the field of lithic studies in general. This work will be an important reference for anyone studying the Paleolithic, Mesolithic, and Neolithic periods, lithic studies, technologies, and more generally,

cultural transmission. What makes a prodigy? Although child prodigies can be found in various disciplines such as music, mathematics, chess, and art, the origins of exceptional has long been controversial. Some have dismissed the notion of innate talent, arguing that prodigies benefit from strong parental, cultural, and environmental influences that helped them develop their extraordinary abilities. Others emphasize the role of genes supported by inborn predispositions. And what role do cognitive processes, from memory to the use of imagery and language, play in

such rapid and early talent development? The notion of prodigy reaches to the heart of questions about creativity, intelligence, development, and the relationship between nature and nurture. This ground-breaking book presents the first scientific exploration of musical prodigies, bringing together research from psychology, neurobiology, genetics, education, musicology, and ethnomusicology, to provide a thorough exploration of prodigious talent. With fascinating case studies of prodigies and their often complex transitions into adolescence and adulthood, this is a

unique investigation of a remarkable phenomenon, for anyone interested in child development, music, and the arts. --Cover. Here is the most comprehensive guide to making your own Native American tools and weapons. This reference takes you through the steps of the basic flint-knapping of arrowheads and scrapers to the most complex decorating and finishing techniques of painting and fletching. Airmen and soldiers, knights and pages, gentlemen and rogues: to you we say stiffen your lip and tighten your sword belt! Tie down your trebuchets, wax your moustache and delve into this manliest of manuals, containing everything the well-bred British man needs to know. The Manual for British Men teaches day-to-day skills such as how to besiege a castle, fire a longbow, correctly

clean a Maxim machine gun and capture an enemy trench; sporting sciences such as jousting, fencing and boxing (Queensbury Rules, of course); and domestic essentials such as how to hunt, kill, clean and cook a wild boar. Flint was the primary raw material used for tools until c. 4000 years ago. Its properties allow the production of very sharp edges, which made it essential in many activities related to craft and subsistence. The fact that flint tools have been used for a long period of time almost everywhere in the world makes them an important source of information in the study of

prehistory. Several general questions about this material are of interest to archaeologists: where was the raw material obtained? How can we distinguish between man-made artefacts and natural pieces of flint? What techniques can be used to work flint, and how can we recognise them? How were the different tools used in an effective way? This book tries to answer all of these questions by describing the subsequent stages: acquisition of raw material, flint knapping techniques, recognition of pseudo-artefacts and geofacts, typology of common tool types found in northwestern

Europe and discussion of the most effective way to use these tools. The book is richly illustrated with full colour figures. Text in Dutch. Flint knapping was one of the primary skills for survival for our prehistoric ancestors. This guide will enable the reader, with practice, to manufacture their own Stone Age tool kit. The expert author guides the reader on a journey of discovery, passing on ancient knowledge of how flint tools from the Palaeolithic, Mesolithic, Neolithic and Bronze age were made and used. The Space Age Kid's Guide To The Stone Age Skill Of Flint Knapping Making

Arrowheads Out Of Rock. For curious kids and young scientists alike ... who want to try it for themselves. Learn that ancient human craft of breaking stone to make tools and hunting weapons ... you can get the basics in just a few minutes. Mastery of the skills of flint knapping can take years. This is the information you need to get started. Welcome to flint knapping ... the ancient art and craft of breaking natural stone to produce tools and hunting weapons. The essential survival skill of untold generations of human beings around the globe. These are the same processes which people used for

thousands of years, in all regions of the world, before the discovery of metals and the various ways to make metal tools. By trying out these skills, you will learn how to break rock so you really can make stone arrowheads yourself. First, we will look at examples of ancient stone artifacts, for reference and for inspiration. Then, you will be introduced to the ancient and modern tools of flint knapping and resources for getting or making those tools. We will also discuss readily available and workable alternative tools which can be used to do the work for a new stone knapper. We will look at

some different kinds of stone and rock which can be used for making arrowheads. You'll see stone breaking processes: first, percussion activities which are useful for making chips and blades. Then, pressure flaking techniques which are used to shape chips and blades of stone into a variety of planned arrow points. Some ancient technical secrets of the skill will be disclosed and illustrated, including specific ways to prepare the stone for pressure flaking, trimming the thin edges and using grind stones to abrade the edge so your flaking tool gets a good grip and does not slip off when you apply pressure at the

edge. And we will talk about the attitude and intent which is needed to break stone ... to master it. It's all here in "The Space Age Kid's Guide To The Stone Age Skill Of Flint Knapping Making Arrowheads Out Of Rock." Now, let's get started. Order your copy today. Read it and study it for a few hours, enjoy the hobby and skill of flint knapping for many years. Knapper's Quarterly is a series of publications about "lithic reduction and the knapper" as well as for those who collect and appreciate the art of flintknapping; an ancient skill that is still practiced today by many people around the world.

Knapping involves the chipping of stone or other materials to produce replicas of arrowheads, knives, and other tools. More recently, there is also a growing trend to produce forms known as eccentrics that are considered unique and magnificent works of art. This publication presents articles on a wide variety of topics related to flintknapping as well as profiles of various knappers from around the world. The articles and profiles herein are contributed by members of the knapping community, which should be of interest to other knappers, collectors of chipped stone

work, archaeologists, scholars, students, lithic specialists, outdoorsmen, survivalists, jewelry makers, artists, etc. Knapper's Quarterly Number 5, Summer 2018, includes the following articles: FINDING YOUR INDIGENOUS IKIGAI by Robert Ratliff; LEARNING THROUGH MAKING by John Piprani, PhD; MAKING A BRONZE AGE ARROWHEAD FOR BEGINNERS by John Piprani, PhD; A GUIDE TO EDGE TO EDGE FLAKING by Dwayne Earnhardt; JAMES K. BOWDEN: FROM STONES TO BONES by Laura Bowden; and MY ATTEMPT AT

PRIMITIVE STONE WEAPON REPRODUCTION by Danny R. Jennings. Additionally, this issue features profiles of the following knappers: RAY ALT FROM MONTANA (IN MEMORIAM) by Barney DeSimone, JAMES HOPPER FROM OREGON by Dwayne Earnhardt, MONICA MCDONALD "THE FLINTKNAPPING CHICK" FROM MICHIGAN, NANCY SHANDS FROM ALABAMA, and PHYLLIS A. THOMPSON FROM ARKANSAS. Also, please feel free to check out the previous issues of Knapper's Quarterly (No. 1, No. 2, No. 3., and No. 4) - all of which are still available

for purchase. Over 13,000 years ago ... those ancient people in North America at the end of the Ice Age were already using almost every source of good knapping stone which we know about today. How could the "Clovis" culture possibly be the first people on this continent? Traveling, hunting and exploring all of this vast land on foot ... discovering and making extensive use of virtually every known stone resource in every corner of the continent ... all in a period of just 300 or 400 years? How was it possible for a small, pioneering population to discover everything,

everywhere, with no local inhabitants to guide their travels and discoveries, even as they spread their unique flint knapping technology from coast to coast in as few as 10 or 15 generations? Does it make practical sense to claim that no one else was here exploring before the "Clovis" culture arrived? Perhaps the very idea that any single pioneering group would be able to and then actually would almost immediately discover all of the existing lithic resources stretches credulity to the breaking point. That's the heart and core of my theory in "CLOVIS The First Americans?" ... and

I'm stickin' to it. What do you think? The aim of this book is to draw together as much information as possible about flint and its properties. The author deals with the origin of chert and its chemical properties, its visible and mechanical properties, and describes the changes that occur in chert as a result of heat treating and natural processes such as weathering and patination. Two appendices outline procedures for chert source analysis projects, and provide basic information about chert types. • in-depth explanation of key concepts • critical for exam preparations •

Making  
arrowheads, blades,  
and other stone  
tools was once a  
survival skill and is  
still a craft  
practiced by  
thousands of  
flintknappers  
around the world.  
In the United  
States, knappers  
gather at regional  
"knap-ins" to  
socialize, exchange  
ideas and material,  
buy and sell both  
equipment and  
knapped art, and  
make stone tools in  
the company of  
others. In between  
these gatherings,  
the knapping  
community stays  
connected through  
newsletters and the

Internet. In this  
book, avid knapper  
and professional  
anthropologist John  
Whittaker offers an  
insider's view of the  
knapping  
community. He  
explores why stone  
tools attract  
modern people and  
what making them  
means to those who  
pursue this art. He  
describes how new  
members are  
incorporated into  
the knapping  
community, how  
novices learn the  
techniques of  
knapping and find  
their roles within  
the group, how the  
community is  
structured, and how  
ethics, rules, and  
beliefs about  
knapping are  
developed and  
transmitted. He  
also explains how  
the practice of  
knapping relates to

professional  
archaeology, the  
trade in modern  
replicas of stone  
tools, and the  
forgery of artifacts.  
Whittaker's book  
thus documents a  
fascinating  
subculture of  
American life and  
introduces the  
wider public to an  
ancient and still  
rewarding craft.  
This book is not  
really about a box  
of rocks. This book  
is about seeing the  
potential in others -  
seeing what those  
rocks in our path  
may become. It  
explores why real  
mentoring may be  
in danger of  
becoming a lost art.  
An art that is vital  
to developing the  
next generations of  
business leaders.  
Each of us, no  
matter our  
background or

experience, has the opportunity to share the lessons we have learned along the way. This book discusses numerous tools and techniques designed to help mentors effectively guide others through personal, caring relationships. And you might just learn something about flint knapping along the way. The Neolithic—a period in which the first sedentary agrarian communities were established across much of Europe—has been a key topic of archaeological research for over a century. However, the variety of evidence across Europe, the range of languages in which research is

carried out, and the way research traditions in different countries have developed makes it very difficult for both students and specialists to gain an overview of continent-wide trends. The Oxford Handbook of Neolithic Europe provides the first comprehensive, geographically extensive, thematic overview of the European Neolithic—from Iberia to Russia and from Norway to Malta—offering both a general introduction and a clear exploration of key issues and current debates surrounding evidence and interpretation. Chapters written by leading experts in

the field examine topics such as the movement of plants, animals, ideas, and people (including recent trends in the application of genetics and isotope analyses); cultural change (from the first appearance of farming to the first metal artefacts); domestic architecture; subsistence; material culture; monuments; and burial and other treatments of the dead. In doing so, the volume also considers the history of research and sets out agendas and themes for future work in the field. UITSLUITEND GESCHIKT VOOR IBOOKS Dit boeiende en

alomvattende handboek is een onmisbare hulp om te kunnen overleven in de wildernis en in elk klimaat, op land of op zee, voor kampeerders, trekkers en zeilers en verder voor iedereen die zich bezighoudt met outdooractiviteiten. Jack Hranicky is a retired U.S. Government contractor, but he has been involved with archaeology as a full-time passion for over 40 years. His main interest is the Paleo-Indian period; however, he has worked in all facets of American archaeology. He has published over 250 papers and over 35 books in archaeology with his most recent being a two-volume,

800-page, 10,000-artifact book on the material culture of Virginia. In Virginia, he is considered an expert on prehistoric stone tools and rockart. The prehistoric Spout Run Observatory site was investigated by him which dated 10,470 YBP. He has served as president of the Archeological Society of Virginia (ASV) and Eastern States Archeological Federation (ESAF), and been past chairman of the Alexandria Archaeology Commission in Virginia. He is a charter member of the Registry of Professional Archaeologists (RPA). And, since he joined the

Archeological Society of Virginia (ASV) in 1966, he is its senior member. And finally, his major publication is *Bipoints Before Clovis*. A detailed, practical guide to the ancient craft of making stone tools, featuring an archaeological analysis. Flintknapping is an ancient craft enjoying a resurgence of interest among both amateur and professional students of prehistoric cultures. In this guide, John C. Whittaker offers the most detailed handbook on

flintknapping currently available and the only one written from the archaeological perspective of interpreting stone tools as well as making them. Flintknapping contains detailed, practical information on making stone tools. Whittaker starts at the beginner level and progresses to discussion of a wide range of techniques. He includes information on necessary tools and materials, as well as step-by-step instructions for making several basic stone tool types. Numerous diagrams allow the reader to visualize the flintknapping process, and drawings of many

stone tools illustrate the discussions and serve as models for beginning knappers. Written for a wide amateur and professional audience, Flintknapping will be essential for practicing knappers as well as for teachers of the history of technology, experimental archaeology, and stone tool analysis. "A mid-range user's guide to flintknapping is long overdue. There have been some admirable attempts to produce such a volume, but these have been targeted at specific, fairly narrow audiences. Not so with Flintknapping. . . . [Whittaker's] clear aim is to reach

professional archaeologists as well as hobbyists. I believe he achieves this goal with incredible skill and humor. . . . I highly recommend this book to everyone interested in flintknapping." —Plains Anthropologist "Very attractive to readers interested in ancient crafts, survival skills, or the history of technology . . . . Far superior to anything currently available." —James C. Woods, director, The Herrett Museum, College of Southern Idaho In this book, Tim Anderson recalls fond memories of family, hard times and good friends as he learned how to knap Indian arrowheads from

flint. Featured are full color pictures of over one hundred replica flint arrowheads and other artifacts, all made by the author. Also included is a gallery of pen and ink artwork, sketched by the author. PUBLISHER'S NOTE: This book contains NO information on how to make arrowheads. For info on flint knapping and making arrowheads, see "Arrowheads: A Beginner's Guide" by Tim Anderson. Een fascinerende kijk op de wereldgeschiedenis van bestsellerauteur Peter Frankopan 'Door terug te kijken, ver terug te kijken, houdt Frankopan ons een spiegel voor, die uiteindelijk haarscherp laat zien dat we ons zullen moeten aanpassen - of we nou willen of niet.' VPRO Tegenlicht De zijderoutes is

een schitterende verkenning van de elementen die de stuwende kracht waren achter de opkomst en de ondergang van wereldrijken, die de stroom van ideeën en goederen bepaalden en nu een nieuw tijdperk inluiden in de internationale politiek. Het gebied ten oosten van de Middellandse en de Zwarte Zee tot aan de Himalaya, dwars door Centraal-Azië tot diep in China en India, was duizenden jaren het middelpunt van de aarde. Het is de bakermat van onze beschaving, waar meer dan 2500 jaar v.C. metropolen ontstonden als Harappa en Mohenjodaro met een bevolking die in de tienduizenden

liep en met straten die waren aangesloten op een geavanceerd rioleringsstelsel. Het is ook het gebied van de zijderoutes - handelsroutes maar ook verbindingswegen waarlangs opvattingen, religies, ideeën, cultuur én ziektes zich konden verspreiden. Hier begint Peter Frankopan zijn nieuwe wereldgeschiedenis . Na de eerste zijderoutes ontstonden er andere: de slavenroute, de goudroute, de route naar het zwarte goud. Maar in onze eenentwintigste eeuw zijn nieuwe routes aan het ontstaan die een grote gelijkheid

vertonen met die allereerste, die Centraal-Azië doorkruisten. De zijderoutes komen terug! De pers over De zijderoutes: 'Briljante verhaallijnen (...) Een wereldgeschiedenis die het middelpunt van die wereld naar het oosten verplaatst.' The Economist 'Veel boeken beweren "een nieuwe geschiedenis van de wereld" te zijn; dit boek heeft die benaming met recht.' The Times 'Frankopan schreef een erg stimulerend boek, dat tal van nieuwe inzichten biedt en bovendien bijzonder prettig leest.' Historisch Nieuwsblad Peter Frankopan is hoogleraar Wereldgeschiedenis

aan Oxford University, waar hij ook Senior Research Fellow is aan Worcester College en directeur van het Centre for Byzantine Research. Hij is de auteur van de bestsellers De eerste kruistocht, De zijderoutes en De nieuwe zijderoutes. Flint knapping, which is the shaping of flint or other fracturing stone to manufacture tools, was one of the primary skills used for survival by our prehistoric ancestors. Early mankind once made and used these implements on a daily basis to hunt, prepare food and clothing, to farm, make shelters, and perform all the

other tasks required for Stone Age existence. A material that has been with us since earliest times, flint still plays a part in our lives today: it is used in cigarette, gas and barbeque lighters; in some parts of Britain it is a major building material; and many of our beaches have shingle which is just flint by another name. In this informative and original guide, expert Robert Turner explains how flint was used, what tools were made and what they were made for, and provides detailed instruction of how to make them, enabling the reader to replicate their own Stone Age toolkit. Illustrated throughout, Flint

Knapping is a journey of archaeological discovery through the Palaeolithic, Mesolithic, Neolithic and Bronze Ages.
